Programming Methodologies:

Component Based UI's | Object Oriented Programming | RESTful API's | MVC | Test-Driven Development | Mobile First & Responsive Design | ERDs | Wire-framing | Cloud-based Storage & File Manipulation

Experience

Web Development Immersive Student, General Assembly Washington, D.C. – June - September 2016

Over 750 hours of purpose-driven coding and adapting modern programming best practices. Currently working to develop a portfolio of individually and collaboratively focused projects which includes:

Food.Me: A responsive, multi-model Ruby On Rails Web App that leverages an SQL database and cloud-based image manipulation to allow authenticated users to create & manage their favorite recipes.
foodme2016.herokuapp.com | github.com/chaseTfreeman/food-me

PicStory: A team-based project built in AngularJS using Google's cloud database: Firebase. PicStory allows user's to share their travel stories through photos. Future additions will include dynamically generated map-markers — requires Firebase/Angular updates.
project3-26607.firebaseio.com | github.com/chaseTfreeman/Picstory

Cut to the

Chase: A web development and technology blog focused on getting started with the latest development frameworks and concepts in the "Internet of Things" era.
Chasetfreeman.com

CrisisMaps: CrisisMaps is a realtime ReactJS app that displays data points for users in disaster zones to find nearby life-sustaining resources like fresh water, food, and shelter.
